Considering Surgery for Pelvic Prolapse?

Learn about minimally invasive 
*da Vinci* Surgery
The Surgery: Pelvic Prolapse Surgery

If you have pelvic prolapse symptoms, your doctor may suggest medicine or lifestyle changes. However, if your symptoms get worse, your doctor may suggest surgery. One procedure for pelvic prolapse is called sacrocolpopexy. During the operation, surgical mesh is used to hold your affected pelvic organ(s) in their natural position. The mesh remains in place permanently. This procedure is not the same as what occurs during transvaginal placement of mesh. Your doctor can fully explain the differences to you.

Sacrocolpopexy is viewed as the best way to correct pelvic prolapse, resolve symptoms and provide long-term support for the vagina.1,2

Open Surgery: Sacrocolpopexy is often done using open surgery. A long, incision (cut) is made in the lower abdomen. The incision must be large enough for your surgeon to fit his or her hands and instruments inside your body to reach your organs.
Minimally Invasive Surgery: Laparoscopic surgery is a minimally invasive option to open surgery. With laparoscopy, your surgeon operates through a few small incisions using a tiny camera and long, thin instruments. The camera sends images to a video screen in the operating room to guide surgeons as they operate.

Another minimally invasive surgery option is robotically-assisted *da Vinci* Surgery. Using *da Vinci* technology, your surgeon operates through a few small incisions - like traditional laparoscopy.
**da Vinci Surgery:**
A Minimally Invasive Surgical Option

The *da Vinci* System features a magnified 3D HD vision system and tiny instruments that bend and rotate far greater than the human hand. These features enable surgeons to operate with enhanced vision, precision, and control.

*da Vinci* Sacrocolpopexy offers the following potential benefits compared to open surgery:

- Lower rate of complications³,⁴
- Less estimated blood loss³,⁴,⁵
- Similar rate of blood transfusions³
- Shorter hospital stay³

*da Vinci* Sacrocolpopexy offers the following potential benefits compared to traditional laparoscopy:

- Similar rate of complications³,⁴,⁶,⁷
- Similar rate of blood transfusions³,⁶
- Similar or less estimated blood loss³,⁴,⁶
- Similar or shorter hospital stay³,⁴,⁷,⁸
- Similar conversion rate (switch to open surgery)³,⁴,⁸

Your surgeon controls the *da Vinci* System, which translates his/her hand movements into smaller, precise movements of tiny instruments inside your body.

**The *da Vinci* System has brought minimally invasive surgery to more than 3 million patients worldwide.**

**Risks & Considerations Related to Sacrocolpopexy:**
Mesh erosion/infection caused by mesh moving from vaginal wall into surrounding organs causing the need for another operation, injury to rectum/bowel, injury to bladder (organ that holds urine), injury to the ureters (ureters drain urine from the kidney into the bladder), front wall of the rectum pushes into the back wall of the vagina, prolapsed bladder (bladder bulges into vagina when supportive tissue weakens), vaginal incision opens or separates, loss of bladder control, pooling of blood between bladder and pubic bone, pooling of blood between the anus and vagina. Pelvic prolapse patients undergoing a hysterectomy who have an undiagnosed cancer may be at risk of having cancer cells spread if the uterus is cut into pieces for removal.
Important Information for Patients:
Serious complications may occur in any surgery, including da Vinci® Surgery, up to and including death. Risks include, but are not limited to, injury to tissues and organs and conversion to other surgical techniques. If your doctor needs to convert the surgery to another surgical technique, this could result in a longer operative time, additional time under anesthesia, additional or larger incisions and/or increased complications. Individual surgical results may vary. Patients who are not candidates for non-robotic minimally invasive surgery are also not candidates for da Vinci Surgery. Patients should talk to their doctor to decide if da Vinci Surgery is right for them. Patients and doctors should review all available information on non-surgical and surgical options in order to make an informed decision. Please also refer to www.davincisurgery.com/Safety for Important Safety Information.
